

## HDI 3D SCANNER ACCESSORIES

The HDI Advance is a component-based solution that offers the flexibility to tailor your 3D scanning system specifically to your needs. Customize or upgrade the system to enhance 3D scanning performance.

### ROTARY TABLE SYSTEM

Rotary table revolves parts to capture 3D scans in 360 degrees so you don't have to spin the object manually. Upon completion, scans are automatically aligned and merged to create a complete 3D model.

#### 14" Diameter

Scan objects up to 100 lbs. for parts

#### 9" Diameter

Scan objects up to 25 lbs. for parts

### BALLBAR

Ballbar is a precision measurement tool. Conducting a test by scanning the ballbar with known measurements helps determine if you are getting the best accuracy from your 3D scanner. Various ballbar sizes available.

#### Available Sizes:

50mm, 100mm, 200mm

### STANDARD LENS KIT

Adjust the scanning volume of the HDI 3D scanner without compromising on the resolution by using interchangeable lenses and calibration boards.

#### Choose From:

##### Lenses (Comes in a pair)

8, 16, 25, and 35mm

##### Calibration Boards

2mm, 3mm, 5mm, 7mm, 10mm, 15mm, 25mm, 50mm

## STUDIO STAND

The tower stand mounted on the HDI Advance offers solid support while scanning. The counter-balanced column in aluminum is mounted on a steel base. It is equipped with two pivoting wheels that lock firmly into place with individual wheel locks. The stand is easily movable around the office or lab.

- Very sturdy and stable
- All metal construction
- Broad working height range
- Minimum Height: 22.05" (56cm)
- Maximum Height: 71.65" (182cm)

## TRAVEL CASE

Get a travel case for the HDI Advance, HDI Macro, or the rotary table for superior protection while you are on the go.

- Tough, rugged, and lightweight
- Waterproof and dust tight that is resistant to corrosion and impact damage
- Easy open double throw latches
- Resistant to UV, solvents, corrosion, and fungus
- The small rotary table fits inside the HDI Advance case if purchased together
